Inter Marine Group

Your Partner in Maritime
Offshore & International Business

For over 36 years, Inter Marine Group has delivered integrated business solutions to the maritime, offshore, renewable energy, logistics and international workforce sectors. We combine engineering expertise, operational excellence and global recruitment capabilities to support complex projects onshore and offshore - from early-stage development to commissioning and long-term operations.

We specialise in comprehensive technical and personnel support for shipping and offshore industries. As one of Poland's leading crewing providers, we supply qualified seafarers for all vessel types, serving shipowners and managers across Europe and Asia for more than three decades. Our crew management services include recruitment, certification verification, crew logistics, payroll administration and full compliance with MLC 2006 and GDPR.

Since 2004, we have also delivered skilled workforce solutions to shipbuilding, offshore construction, energy and heavy industry projects. We provide end-to-end recruitment and employment services, including logistics, accommodation, insurance and payroll management, ensuring operational continuity and regulatory compliance.

IM Training, our GWO-certified training centre in Gdynia, plays a strategic role in preparing technicians and offshore professionals for safe work on onshore and offshore wind farms. We offer one of the most comprehensive GWO training portfolios in Poland. Our modern training infrastructure, experienced industry instructors and integrated occupational medical services ensure that individuals and full project teams are fully prepared for the realities of offshore operations.

Through IM Energy and our offshore teams, we act as a technical partner for offshore wind and maritime energy projects. We support clients across all project phases - from technical advisory and project management through Factory and Site Acceptance Testing (FAT/SAT), offshore commissioning, systems' integration, and long-term Operations & Maintenance services.

At Inter Marine Group, we connect people, competencies and processes to deliver reliable, compliant and future-ready solutions.

We're focused on solutions!

IM Training

GWO-Certified Wind Industry Training Centre

IM Training is a modern education and training centre based in Gdynia, Poland, certified by the Global Wind Organisation (GWO). For years, we have been supporting both aspiring and experienced wind industry technicians by providing the knowledge and practical competencies required for safe and effective work on onshore and offshore wind farms. We train individuals as well as full project teams from Poland and across Europe and international markets. Our approach is built on high training standards and a strong practical focus. Participants benefit from advanced working-at-height structures, professional rescue and safety equipment, and fully equipped multimedia training facilities. All courses are delivered by certified GWO instructors with extensive hands-on experience in wind farm servicing and rescue operations - professionals who have worked in the environments our trainees are preparing to enter.

Why IM Training?

- One of the most comprehensive GWO training portfolios on the market
- Certified GWO instructors with real wind farm & offshore experience
- Flexible and fast scheduling
- Individual approach with strong practical focus
- Modern training infrastructure
- Supportive learning environment
- Comprehensive training coordination, including logistics and occupational medical services

Our Training Portfolio

GWO Courses, including: Basic Safety Training (BST), Basic Technical Training (BTT), Wind Limited Access (ONL/OFL), Advanced Rescue Training (ART), Slinger Signaller (SLS), Enhanced First Aid (EFA), Crane and Hoist Basic User (CHBU), Control of Hazardous Energies (CoHe), High Voltage (Operations & Cable Pulling) - offered exclusively in Poland and among only a few centres in Europe.

Additional Certified Courses: Boat Transfer (BTR), LOTO (Lockout Tagout), Confined Space Entry (CSE), Confined Space Rescue (CSR), Further Safety Training (FST), Proficiency In Fire Fighting On PCTC, RO-RO & Ferries (FFPCTC), Defibrillator Training (AED).

GWO Refresher Courses

Join wind industry professionals and build your future with IM Training!

We have something special for you!

Offer valid until March 31, 2026.

IM Energy

Your Partner In Offshore Wind Projects

IM Energy is a specialised company within Inter Marine Group, dedicated to delivering comprehensive technical support for offshore wind projects. We act as a partner to investors and contractors across key stages of project execution - from preparation and installation supervision to commissioning and operational support.

Our mission is to ensure safe, compliant and high-quality delivery of offshore wind infrastructure. We combine technical expertise with hands-on offshore experience, supporting demanding projects in complex marine environments.

During the onshore phase, we provide Factory Acceptance Testing (FAT), Factory Integration Testing (FIT), documentation verification, installation supervision and Site Acceptance Testing (SAT). We verify system conformity, interface integration and cause-and-effect logic to support operational readiness before offshore deployment.

In the offshore phase, our teams conduct Offshore SAT, visual and technical inspections after marine transport, mechanical and electrical commissioning, static and dynamic testing, and integration with dependent systems. We also act as Offshore Installation Manager, coordinating site activities and managing Permit to Work systems in line with project safety requirements.

In the Operations & Maintenance phase, we deliver preventive inspections, corrective maintenance and troubleshooting, warranty support, auxiliary infrastructure maintenance and O&M. documentation development. Our specialists provide job-specific technical training to support operational continuity.

We work through interdisciplinary teams combining electrical, mechanical and project coordination expertise, enabling effective cooperation between stakeholders.

We actively contribute to building local supply chain capacity in the offshore wind sector and collaborate with universities, R&D centres and certification bodies to support the development of industry competencies and standards.

IM Energy stands for reliability, technical precision and long-term partnership!
